Q1)

Documenting "Issue Book" Use Case:

Use Case Name: Issuing a Book

Description: This use case outlines the process by which a registered student borrows a book from the library.

Primary Actor: Registered Student

Secondary Actors: Library System and Librarian

Preconditions:

- The registered student must log in and be verified by the librarian.
- The desired book must be available in the library's collection.

Postconditions:

- The book is marked as issued to the student.
- A due date for book return is established.
- The student receives a notification confirming the successful issuance.

Main Flow:

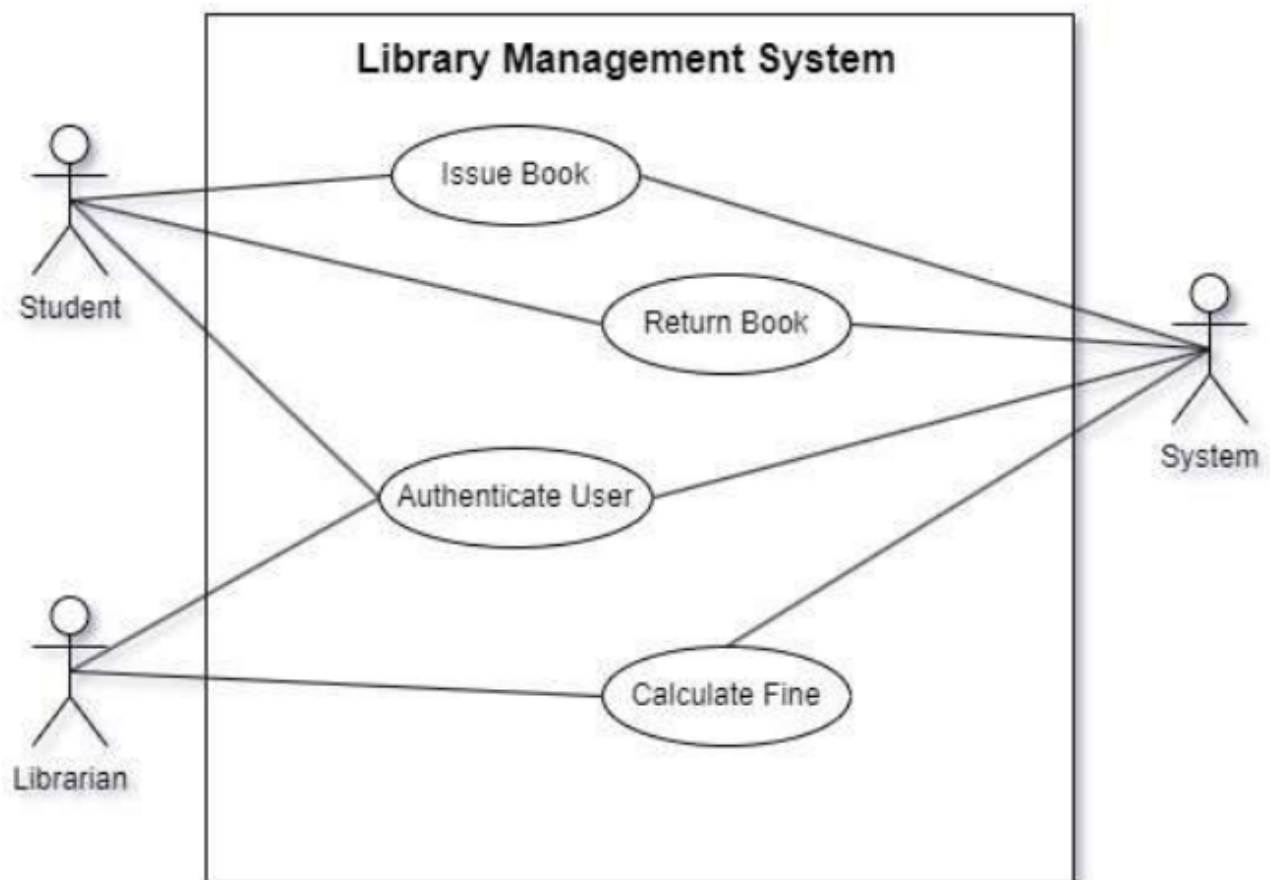

- The registered student initiates a book issuance request.
- The system verifies the student's authentication status.
- The system checks the availability of the requested book.
- If the book is available, the system records it as issued to the 1 student.
- The system sets a due date for the book's return.

- Notifications are sent to both the student and the librarian to confirm the successful issuance.

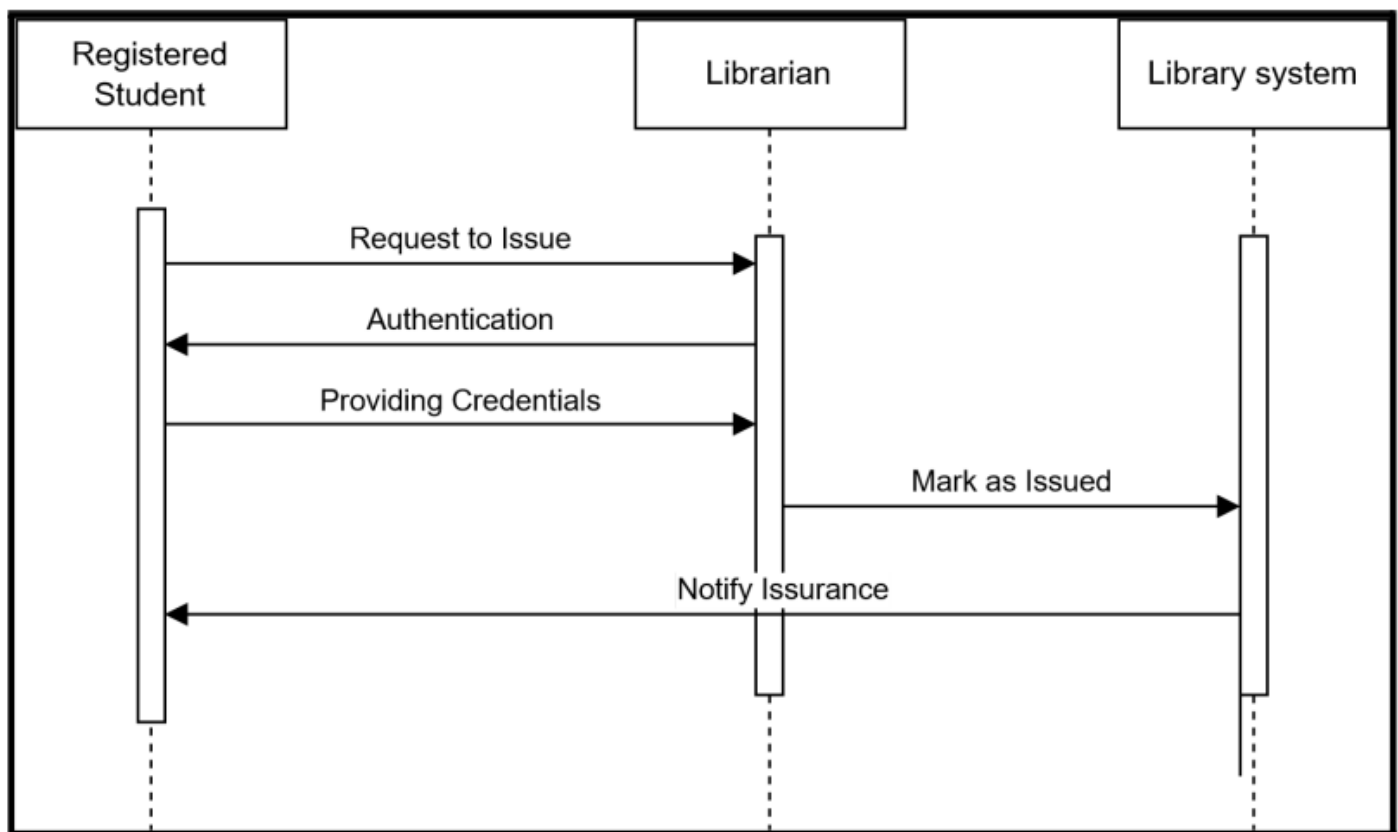

Alternate Flows:

- If the requested book is unavailable, the system notifies the student that it cannot be issued at the moment.
- In case the user's authentication fails, the system informs the librarian of the issue.
